Brainstorm & Idea Prioritization

Brainstorming provided an open and collaborative environment where every team member contributed ideas related to improving retail sales through data analytics. Different retail business problems were discussed and evaluated based on business value, data availability, implementation feasibility, and visualization capability. The team focused on selecting a project that could generate meaningful business insights using Tableau Desktop and help retail organizations make informed decisions.

This brainstorming session enabled the team to compare multiple project ideas, identify practical solutions, and finalize the project titled **Strategic Product Placement Analysis**.

Step-1: Team Gathering, Collaboration and Selection of Problem Statement

The team discussed several retail analytics problems and reviewed publicly available datasets. Different business scenarios related to customer purchasing behaviour, product positioning, promotions, seasonal demand, and competitor pricing were analysed before selecting the final project.

Problem Statement

How might we analyse retail sales data and customer purchasing behaviour using Tableau dashboards so that retail businesses can identify optimal product placement strategies, improve customer engagement, and increase overall sales performance?

Brainstorming Rules Followed

✓ Stay focused on retail sales optimization.
✓ Encourage innovative and practical ideas.
✓ Avoid judging ideas during discussion.
✓ Build upon teammates' suggestions.
✓ Generate a large number of ideas.
✓ Organize ideas into meaningful groups.

Step-2: Brainstorm, Idea Listing and Grouping

Individual Ideas Generated

Team Member	Ideas
Team Lead	Collect retail sales dataset, clean missing values, analyse sales trends, identify product performance, prepare Tableau dashboards
Member 2	Analyse customer demographics, promotion impact, seasonal demand, competitor pricing, customer buying behaviour
Member 3	Create interactive dashboard, KPI cards, filters, charts, Tableau Story, publish on Tableau Public
Member 4	Upload project files to GitHub, prepare documentation, organize screenshots, publish final report

Grouped Ideas

Cluster A – Data Collection & Preparation • Collect Product Positioning dataset. • Remove missing values. • Verify data consistency. • Prepare dataset for Tableau.
Cluster B – Sales & Customer Analysis • Analyse product category performance. • Compare competitor pricing. • Analyse promotion impact. • Study customer demographics. • Evaluate seasonal sales.
Cluster C – Dashboard Development • Create KPI cards. • Design interactive charts. • Build dashboard. • Create Tableau Story. • Generate business insights.
Cluster D – Deployment • Publish dashboard on Tableau Public. • Upload workbook to GitHub. • Upload screenshots. • Upload project report. • Maintain project repository.

Step-3: Idea Prioritization

Plan Next • Predictive Sales Analysis • Machine Learning Integration • Customer Recommendation System	Do First • Data Cleaning • Dashboard Development • Product Category Analysis • Product Position Analysis • Sales Volume Analysis
Reconsider • Inventory Forecasting • Real-time Retail Analytics	Fill-in Tasks • Tableau Story • Tableau Public Publishing • GitHub Repository • Project Documentation

Prioritization Summary

The ideas placed in the **Do First** category formed the foundation of the completed project. Data cleaning, dashboard development, product category analysis, promotion analysis, and customer demographic analysis were successfully implemented using Tableau Desktop. Supporting activities such as GitHub repository creation, Tableau Public publishing, and documentation were completed alongside the main analytical work. Advanced features such as predictive analytics and recommendation systems were identified as future enhancements because they require additional datasets and machine learning techniques.

Expected Outcomes

Objective	Expected Outcome
Product Placement Analysis	Identify optimal product placement strategies.
Customer Behaviour Analysis	Understand customer purchasing patterns.
Sales Performance Analysis	Compare product category performance.
Dashboard Development	Build interactive Tableau dashboards and stories.
Business Insights	Support data-driven retail decision-making.
Documentation & Deployment	Publish the project on Tableau Public and GitHub.
