Project: Strategic Product Placement Analysis

Introduction

Retail businesses generate large volumes of sales data every day, but identifying the most effective product placement strategy remains a major challenge. Products placed in less visible locations often receive lower customer attention, resulting in decreased sales and reduced profitability. Traditional reporting methods provide limited insights into customer purchasing behaviour, promotional effectiveness, seasonal demand, and competitor pricing.

To overcome these challenges, this project proposes an interactive Tableau-based analytical solution that transforms raw retail sales data into meaningful visualizations. The dashboard enables retailers to monitor product performance, understand customer behaviour, evaluate promotional campaigns, and make data-driven decisions for improving product placement and increasing overall sales performance.

Problem Overview

Business Challenge	Business Impact
Poor product placement	Reduced product visibility and lower sales
Manual sales analysis	Time-consuming and inefficient decision-making
Limited customer behaviour analysis	Difficulty understanding customer preferences
No interactive dashboards	Delayed business insights
Ineffective promotional planning	Reduced marketing effectiveness

PS-1

Field	Description
I am	Retail Store Manager
I'm trying to	Improve product placement, increase customer engagement, and maximize overall sales performance within the retail store.
But	Sales information is distributed across multiple records, making it difficult to identify high-performing products, customer preferences, and effective shelf placement strategies.
Because	There is no centralized dashboard that provides interactive visualizations for analyzing product performance, promotions, customer demographics, and seasonal sales trends.
Which makes me feel	Frustrated because business decisions become slower, less accurate, and often rely on assumptions rather than actual data insights.

PS-2

Field	Description
I am	Business Analyst
I'm trying to	Analyze retail sales data, customer purchasing behaviour, competitor pricing, promotional effectiveness, and seasonal demand to support business decision-making.
But	The dataset contains a large amount of raw information that is difficult to interpret using traditional spreadsheets and manual reports.
Because	Interactive analytical dashboards and business intelligence tools are not available for exploring sales trends and customer behaviour.
Which makes me feel	Inefficient because important business insights may be overlooked, affecting retail growth and profitability.

Stakeholders

Stakeholder	Role in the Project
Retail Store Manager	Uses dashboards to improve product placement and monitor sales.
Business Analyst	Performs sales analysis and generates business insights.

Stakeholder	Role in the Project
Marketing Team	Evaluates promotional campaign effectiveness.
Inventory Manager	Uses sales trends for inventory planning.
Decision Makers	Make strategic business decisions using dashboard insights.

Objectives of the Proposed Solution

Objective ID	Objective
OBJ-1	Analyze retail sales data using Tableau Desktop.
OBJ-2	Identify high-performing product categories.
OBJ-3	Study customer purchasing behaviour.
OBJ-4	Evaluate promotional impact on sales performance.
OBJ-5	Compare competitor pricing with product sales.
OBJ-6	Develop interactive dashboards and Tableau Stories.
OBJ-7	Support data-driven business decision-making.

Expected Benefits

- Improve product visibility through better placement strategies.
 - Increase customer satisfaction and shopping experience.
 - Support data-driven business decisions.
 - Reduce manual effort in sales analysis.
 - Improve promotional planning.
 - Identify seasonal sales trends.
 - Increase retail profitability through analytical insights.
-

Problem to Solution Flow

Conclusion

The **Strategic Product Placement Analysis** project addresses important challenges faced by retail businesses by providing an interactive data visualization solution. The project enables retailers to understand customer purchasing behaviour, optimize product placement, evaluate promotional effectiveness, and improve overall sales performance through Tableau dashboards and stories. The proposed solution supports informed business decisions and contributes to increased operational efficiency and customer satisfaction.
