Empathy Map Canvas

An empathy map is a visual tool used to understand the needs, thoughts, feelings, and behaviours of users. It helps identify business challenges from the user's perspective and enables the development of data-driven solutions. In this project, the primary user is a **Retail Store Manager** responsible for improving product placement and increasing sales performance.

Our Empathy Map Canvas: Retail Store Manager

Primary User Persona:

A retail store manager responsible for managing product placement, monitoring sales performance, understanding customer purchasing behaviour, and improving business profitability through data-driven decisions.

THINKS • How can product placement be optimized to improve sales? • Which product categories generate the highest revenue? • Are promotional campaigns increasing customer purchases? • How do seasonal trends affect product demand? • What insights can help improve overall store performance?	SEES • Different products placed in various store locations. • Customer buying behaviour changing across seasons. • Competitors offering attractive pricing and promotions. • Large amounts of sales data that are difficult to analyze manually. • Sales performance varying across product categories.
SAYS • "We need better insights to improve product placement." • "Which products should be displayed in high-traffic areas?" • "Are our promotional offers increasing sales?" • "How can we improve customer shopping experience?" • "We should use data to support business decisions."	DOES • Reviews daily and monthly sales reports. • Monitors product category performance. • Compares competitor pricing strategies. • Evaluates promotional campaign effectiveness. • Uses dashboards and reports to make business decisions.
PAINS • Difficulty identifying high-performing products. • Poor visibility of slow-selling products. • Manual analysis consumes significant time. • Limited understanding of customer purchasing behaviour. • Inefficient utilization of shelf space. • Lack of interactive visual reports for decision-making.	GAINS • Increased sales and business profitability. • Better product placement strategies. • Improved customer satisfaction. • Faster and more accurate business decisions. • Easy access to interactive dashboards and visualizations. • Identification of sales trends and customer preferences.

User Needs

- Interactive dashboards for retail sales analysis.
- Clear visualization of product category performance.
- Insights into customer purchasing behaviour.

- Analysis of promotion impact and seasonal demand.
 - Comparison of competitor pricing.
 - Recommendations for optimal product placement.
 - Easy-to-understand business reports.
-

Opportunities

- Use Tableau dashboards to analyze retail sales patterns.
- Identify high-performing and low-performing products.
- Optimize shelf placement using customer behaviour insights.
- Improve promotional strategies based on sales analysis.
- Support business decision-making through interactive visualizations.
- Increase overall retail sales using data-driven recommendations.
