

IDEATION PHASE

Strategic Product Placement Analysis

Brainstorming & Idea Generation

During the brainstorming session, our team discussed multiple business problems related to retail sales and customer purchasing behavior. Several ideas were generated and evaluated based on feasibility, impact, data availability, and implementation complexity.

Ideas Generated

1. Customer Purchasing Behavior Analysis
2. Product Placement Optimization
3. Seasonal Sales Trend Analysis
4. Promotional Campaign Effectiveness Analysis
5. Customer Segmentation using Sales Data
6. Inventory Demand Forecasting
7. Store Layout Optimization
8. Strategic Product Placement Analysis

Evaluation Criteria

- Availability of dataset
- Business impact
- Ease of implementation
- Visualization possibilities
- Industry relevance
- Scalability

After evaluating all ideas, the team selected **Strategic Product Placement Analysis** because it provides actionable business insights and directly contributes to improving retail sales performance.

Expected Outcomes

- Identify high-performing products.
- Analyze customer purchasing trends.
- Improve product visibility.
- Increase sales revenue.
- Support business decision-making.

Problem Statement

Retail businesses often struggle to determine the most effective placement strategy for products within stores. Products placed in inappropriate locations may receive less customer attention, resulting in reduced sales and lower profitability.

The absence of data-driven decision-making in product placement causes businesses to rely on assumptions rather than actual customer purchasing behavior. This results in inefficient shelf utilization and missed revenue opportunities. The proposed solution aims to analyze sales data and customer purchasing patterns to identify optimal product placement strategies that maximize visibility and improve sales performance.

Empathy Map

Think and Feel

- Need to improve store profitability.
- Want to maximize sales performance.
- Concerned about underperforming products.
- Looking for data-driven insights.

Hear

- Customer feedback regarding product accessibility.
- Suggestions from sales teams.
- Recommendations from management.
- Market trends and competitor strategies.

See

- Some products sell faster than others.
- Competitors attract more customers.
- Inefficient utilization of shelf space.
- Seasonal variations in customer demand.

Say and Do

- Rearrange products regularly.
- Introduce promotional campaigns.
- Monitor sales reports.
- Analyze customer buying behavior.

Pain Points

- Low sales for some products.
- Poor visibility of important products.
- Difficulty identifying customer preferences.
- Inefficient use of shelf space.

Gains

- Increased revenue.
- Better customer satisfaction.
- Improved inventory management.
- Data-driven business decisions.
