

REQUIREMENT ANALYSIS

Customer Journey Map

Project Title	Strategic Product Placement Analysis
Repository	https://github.com/sanjari4013/Strategic-Product-Placement-Analysis
Platform	Tableau Desktop & Tableau Public
Team Members	Noorul Ziya Sanjari Shaik (Team Lead) Manda Srinivas Vamsi Krishna Pillamudi

Project Description

The **Strategic Product Placement Analysis** project analyzes retail sales data to understand how product placement influences customer purchasing behaviour and overall sales performance. Using Tableau Desktop, interactive dashboards and story points are developed to visualize key business metrics such as product category performance, sales volume, promotion effectiveness, competitor pricing, customer demographics, foot traffic, and seasonal demand.

The dashboard enables retail managers to identify high-performing products, optimize shelf placement, and improve customer engagement through data-driven decision-making. The completed project is published on Tableau Public, while all project files, reports, and documentation are maintained using GitHub.

Dashboard Features

The dashboard contains the following analytical components:

- Product Category Analysis
- Product Position Analysis
- Sales Volume Analysis
- Promotion Impact Analysis
- Competitor Pricing Analysis
- Customer Demographic Analysis
- Foot Traffic Analysis
- Seasonal Trend Analysis
- KPI Dashboard
- Interactive Filters

- Tableau Story

Customer Persona

Field	Description
Primary User	Retail Store Manager
Age	30–50 Years
Occupation	Retail Store Manager
Experience	Responsible for product placement, sales monitoring, inventory management, and customer satisfaction.

Goals

- Improve product placement strategies.
- Increase overall retail sales.
- Understand customer purchasing behaviour.
- Monitor sales performance.
- Evaluate promotional effectiveness.
- Optimize inventory planning.
- Make data-driven business decisions.

Challenges

- Large retail datasets.
 - Manual sales reporting.
 - Poor product visibility.
 - Difficulty identifying sales trends.
 - Understanding customer preferences.
 - Measuring promotional effectiveness.
 - Competitor pricing analysis.
-

Customer Journey Map

Journey Stage	Customer Actions	Touchpoints	Customer Goals	Pain Points	Opportunities / Solutions
Stage 1 – Access Dashboard	Opens the Tableau Dashboard to review retail sales performance.	Tableau Desktop, Tableau Public Dashboard	Get a quick overview of product placement and sales.	Difficulty understanding raw sales data.	Provide an intuitive dashboard with KPI cards and summary metrics.
Stage 2 – Analyze Product Performance	Reviews product categories, product positions, and sales volume using interactive charts.	Product Category Charts, Sales Charts, KPI Dashboard	Identify high-performing and low-performing products.	Hard to compare multiple product categories manually.	Interactive visualizations make comparison simple and accurate.
Stage 3 – Explore Business Insights	Applies filters to analyze promotions, competitor pricing, customer demographics, foot traffic, and seasonal trends.	Interactive Filters, Dashboard Visualizations	Understand factors influencing customer purchasing behaviour.	Manual reports do not provide detailed business insights.	Dynamic filters and charts help discover hidden trends.
Stage 4 – Review Tableau Story	Navigates through Tableau Story pages to understand business findings and recommendations.	Tableau Story, Story Navigation	Understand the complete analytical process and findings.	Difficulty presenting business insights in a structured manner.	Story points provide a sequential and easy-to-understand presentation of insights.
Stage 5 – Decision Making	Uses dashboard insights to improve product placement, promotional strategies, and inventory planning.	Dashboard Reports, Tableau Public, GitHub Documentation	Improve sales performance and customer satisfaction.	Lack of confidence in making business decisions using raw data.	Data-driven recommendations support effective retail management and increase overall business performance.

Customer Journey Summary

Stage	User Activity	Outcome
Access Dashboard	Open Tableau Dashboard	View business overview
Review KPIs	Analyze product performance	Identify sales trends
Analyze Data	Apply filters and compare metrics	Discover business insights
Explore Story	Review Tableau Story	Understand recommendations
Decision Making	Improve product placement	Increase sales performance

Expected Outcomes

Objective	Expected Result
Product Placement Analysis	Better shelf optimization
Customer Behaviour Analysis	Improved customer understanding
Sales Performance Analysis	Increased revenue
Interactive Dashboard	Faster business insights
Tableau Story	Better visualization of recommendations
Business Decisions	Data-driven retail management

Conclusion

The Customer Journey Map illustrates how a Retail Store Manager interacts with the Strategic Product Placement Analysis dashboard from initial access to final decision-making. The interactive Tableau Dashboard and Story simplify complex retail sales data, enabling users to understand customer behaviour, evaluate product performance, optimize shelf placement, and improve overall business performance through informed, data-driven decisions.
