

REQUIREMENT ANALYSIS

Solution Requirements

Date	01 JULY 2026
Team ID	
Project Name	Strategic Product Placement Analysis
Maximum Marks	4 Marks

Introduction

The **Strategic Product Placement Analysis** project is designed to help retail businesses analyze product placement strategies and customer purchasing behavior using interactive Tableau dashboards. The solution transforms raw retail sales data into meaningful visualizations, enabling retail managers and business analysts to identify sales trends, evaluate promotional effectiveness, optimize shelf placement, and improve business performance.

The solution requirements are divided into **Functional Requirements** and **Non-Functional Requirements** to clearly define the expected features and quality attributes of the system.

Functional Requirements

The following functional requirements describe the major features of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Dashboard Visualization	Display an interactive Tableau dashboard with KPI cards showing Total Sales, Average Sales, Product Categories, and Product Positions.
FR-2	Product Category Analysis	Analyze sales performance across different product categories and identify high-performing products.
FR-3	Product Position Analysis	Compare sales based on product placement positions and evaluate their impact on customer purchasing behaviour.
FR-4	Promotion Impact Analysis	Analyze how promotional campaigns influence product sales and customer engagement.
FR-5	Competitor Pricing Analysis	Compare competitor pricing with product sales to understand pricing strategies.
FR-6	Customer Demographic Analysis	Analyze customer purchasing patterns across different demographic groups.
FR-7	Seasonal Trend Analysis	Identify seasonal demand patterns and evaluate their influence on product sales.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-8	Foot Traffic Analysis	Analyze the relationship between customer foot traffic and sales performance.
FR-9	Interactive Filters	Allow users to filter dashboard data by product category, season, promotion, and customer demographics.
FR-10	Tableau Story	Present business insights through sequential Tableau Story points for better understanding.
FR-11	Business Reporting	Generate summarized analytical reports to support retail business decision-making.
FR-12	Tableau Public Publishing	Publish the dashboard and story on Tableau Public for online accessibility.

Functional Requirement Summary

Module	Purpose
Dashboard	Display retail sales overview.
Product Analysis	Compare product performance.
Sales Analysis	Evaluate sales trends.
Promotion Analysis	Measure promotional effectiveness.
Customer Analysis	Understand purchasing behaviour.
Story	Present business insights.
Reports	Support decision-making.

Non-Functional Requirements

The following non-functional requirements describe the quality attributes expected from the solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The dashboard should be simple, interactive, and easy to understand for retail managers and business analysts.

NFR No.	Non-Functional Requirement	Description
NFR-2	Reliability	The dashboard should consistently provide accurate analysis based on the retail sales dataset.
NFR-3	Performance	Dashboard visualizations and filters should load quickly and respond efficiently.
NFR-4	Availability	The Tableau Public dashboard should be accessible online whenever required.
NFR-5	Scalability	The solution should support additional retail datasets and future dashboard enhancements.
NFR-6	Maintainability	Dashboard and project documentation should be easy to update with new retail sales data.
NFR-7	Portability	The Tableau dashboard should be accessible through Tableau Desktop and Tableau Public across multiple devices.
NFR-8	Security	Only non-sensitive retail sales data should be published, ensuring no confidential business information is exposed.

Requirement Classification

Requirement Type	Examples
Functional Requirements	Dashboard, Story, Filters, Reports, Sales Analysis
Non-Functional Requirements	Performance, Reliability, Security, Scalability, Availability

Expected Benefits

- Interactive retail sales analysis.
- Improved product placement strategies.
- Better understanding of customer purchasing behaviour.
- Faster business decision-making.
- Improved promotional planning.
- Better inventory and sales management.
- Increased customer satisfaction.
- Data-driven business recommendations.

Conclusion

The proposed solution requirements ensure that the **Strategic Product Placement Analysis** system delivers accurate, interactive, and meaningful retail analytics. The combination of functional and non-functional requirements provides a clear roadmap for developing a scalable, reliable, and user-friendly Tableau-based business intelligence solution.
