

PERFORMANCE TESTING PHASE

Strategic Product Placement Analysis

❖ 1.1 Accuracy Testing

Accuracy testing was conducted to ensure that the dashboard calculations and visualizations accurately represented the values present in the original dataset. Sales volume, product prices, competitor prices, and promotional information displayed in the dashboard were cross-verified with the source CSV file.

The testing confirmed that all charts, KPIs, and story insights matched the underlying dataset without discrepancies. This ensured the reliability of the analysis and business recommendations generated by the dashboard.

❖ 1.2 Performance Testing

Performance testing was performed to evaluate the responsiveness and loading speed of the Tableau dashboard. The dashboard was tested with the complete dataset containing 1000 records.

Results showed that visualizations loaded quickly and user interactions such as filtering, sorting, and navigating between dashboard pages were completed without noticeable delays.

The dashboard demonstrated satisfactory performance under normal operating conditions.

❖ 1.3 Usability Testing

Usability testing was carried out to ensure that users could easily understand and navigate the dashboard. The dashboard design was evaluated for simplicity, readability, and user friendliness.

Features such as filters, legends, tooltips, and story navigation were tested to verify ease of use. Users were able to identify insights and trends without requiring technical expertise in data analytics.

The testing confirmed that the dashboard provides an intuitive and user-friendly experience.

❖ 1.4 Compatibility Testing

Compatibility testing was performed to verify that the dashboard functions correctly across different platforms and environments.

The Tableau workbook and Tableau Public dashboard were tested on:

- Windows operating system
- Google Chrome browser
- Microsoft Edge browser
- Tableau Desktop
- Tableau Public platform

❖ **Performance Testing Summary Table**

Testing Type	Objective	Result
Accuracy Testing	Verify correctness of data and calculations	Passed
Performance Testing	Evaluate dashboard responsiveness	Passed
Usability Testing	Ensure user-friendly interaction	Passed
Compatibility Testing	Verify cross-platform functionality	Passed
