

REQUIREMENT ANALYSIS

Strategic Product Placement Analysis

Customer Journey Map

- **Step 1: Identify Business Problem**
The retail manager identifies declining sales and inconsistent product performance across categories.
- **Step 2: Collect Data**
Historical sales data and customer purchasing information are collected from available datasets.
- **Step 3: Analyze Data**
The dataset is analyzed to understand sales patterns, purchasing behavior, and product demand.
- **Step 4: Create Visualizations**
Interactive charts and dashboards are developed using Tableau Desktop.
- **Step 5: Generate Insights**
Business insights regarding product placement and sales trends are generated.
- **Step 6: Implement Recommendations**
The organization uses the insights to optimize product placement strategies.
- **Step 7: Monitor Performance**
Sales performance is monitored continuously to measure improvement.

Solution Requirements

Functional Requirements

- **FR-1 Dataset Import**
The system shall allow importing sales datasets in CSV format for analysis.
- **FR-2 Data Cleaning**
The system shall process missing values and inconsistencies within the dataset.
- **FR-3 Visualization Creation**
The system shall generate interactive charts, graphs, and visual reports.
- **FR-4 Dashboard Development**
The system shall provide dashboards that summarize important business metrics.
- **FR-5 Story Creation**
The system shall provide story points that explain business findings sequentially.
- **FR-6 Publishing**
The project shall be published on Tableau Public for accessibility.

Non-Functional Requirements

- **NFR-1 Usability**
The dashboard should be easy to understand and navigate.
- **NFR-2 Reliability**
The analysis should provide accurate and consistent results.
- **NFR-3 Performance**
The dashboard should load visualizations quickly.
- **NFR-4 Availability**
The published dashboard should be accessible online.
- **NFR-5 Scalability**
The solution should support larger datasets in future implementations.
- **NFR-6 Maintainability**
The dashboard should be easy to update when new datasets become available.
