

PROJECT DESIGN PHASE

Proposed Solution

Date	01 JULY 2026
Team ID	
Project Name	Strategic Product Placement Analysis
Maximum Marks	2 Marks

Introduction

Retail businesses continuously seek ways to improve customer satisfaction and increase sales revenue. One of the major factors influencing customer purchasing decisions is the strategic placement of products within a store. Traditional methods of analyzing product placement rely on manual reports and historical observations, making it difficult to identify patterns and optimize retail strategies.

The proposed solution is to develop an interactive business intelligence dashboard using **Tableau Desktop**. The solution analyzes retail sales data stored in the **Product_Positioning.csv** dataset and transforms it into meaningful visualizations. The dashboard enables users to explore product category performance, customer demographics, competitor pricing, promotional impact, seasonal trends, and foot traffic through interactive charts and filters.

The completed dashboard is published on **Tableau Public**, while all project files, reports, and documentation are maintained in a **GitHub repository**. This solution supports retail managers and business analysts in making informed, data-driven decisions that improve product placement and overall business performance.

Proposed Solution Workflow

Phase	Activity	Output
Data Collection	Collect Product_Positioning.csv dataset	Retail Sales Dataset
Data Preparation	Clean and validate data	Processed Dataset
Data Analysis	Analyze product performance and sales trends	Business Insights
Dashboard Development	Create charts, KPIs, filters, and dashboards	Interactive Dashboard
Story Development	Create Tableau Story points	Business Story
Deployment	Publish dashboard on Tableau Public	Online Dashboard
Documentation	Upload reports and files to GitHub	Project Repository

Proposed System Features

Feature	Description
Interactive Dashboard	Displays retail sales information through charts and KPI cards.
Product Category Analysis	Compares sales performance across different product categories.
Product Position Analysis	Evaluates how product placement affects sales.
Customer Demographic Analysis	Studies purchasing behaviour of different customer groups.
Promotion Impact Analysis	Measures the effectiveness of promotional campaigns.
Competitor Price Analysis	Compares competitor pricing with product sales.
Seasonal Trend Analysis	Identifies seasonal variations in product demand.
Interactive Filters	Allows users to filter dashboard information dynamically.
Tableau Story	Presents insights in a logical sequence.

Users of the Proposed System

User	Role
Retail Store Manager	Uses dashboard to optimize product placement and improve sales.
Business Analyst	Analyzes sales data and prepares business reports.
Marketing Team	Evaluates promotional campaigns and customer trends.
Inventory Manager	Plans inventory based on sales analysis.
Decision Makers	Make strategic business decisions using dashboard insights.

Benefits of the Proposed Solution

The proposed solution provides an efficient and interactive platform for retail sales analysis. Instead of manually analyzing large datasets, users can quickly identify sales trends, customer preferences, and product performance using visual dashboards.

The dashboard enables businesses to compare product categories, monitor promotional effectiveness, understand customer demographics, and evaluate competitor pricing. Interactive filters and Tableau Stories simplify data exploration and improve decision-making.

By implementing this solution, retailers can optimize product placement, enhance customer satisfaction, increase operational efficiency, and improve overall sales performance.

Advantages

Advantage	Description
Interactive Visualization	Easy understanding of complex retail sales data.
Data-Driven Decision Making	Supports informed business decisions.
Better Product Placement	Helps identify optimal shelf placement strategies.
Customer Behaviour Analysis	Understands customer purchasing patterns.
Improved Sales Performance	Increases product visibility and revenue.
Easy Dashboard Navigation	Interactive filters improve user experience.
Online Accessibility	Dashboard available through Tableau Public.
Documentation Management	GitHub maintains reports and project files.

Expected Outcomes

Objective	Expected Result
Product Placement Analysis	Better shelf arrangement and visibility.
Customer Behaviour Analysis	Improved understanding of purchasing trends.
Sales Analysis	Increased sales through informed decisions.
Interactive Dashboard	Faster and clearer business insights.
Tableau Story	Structured presentation of analytical findings.
Business Growth	Higher customer satisfaction and profitability.

Conclusion

The **Strategic Product Placement Analysis** project provides an effective Tableau-based business intelligence solution for retail sales analysis. By converting raw sales data into interactive dashboards and stories, the proposed system enables retailers to optimize product placement, analyze customer purchasing behaviour, and improve business performance. The integration of Tableau Public and GitHub ensures accessibility, collaboration, and proper project documentation, making the solution practical, scalable, and valuable for retail organizations.
